Dear Jenny,

I am a Student at the Rochester Institute of Technology, currently in my first semester in the MS Computer Software Engineering course. My areas of interest lie in making sense out of gazillions amount of data using technology and also to manage the storage of data. After having attended the information session provided by your company at our campus, I felt that the Portfolio Analytics summer internship position seems to fit very well with my education, experience, and career interests.

Most recently, I've developed web applications using Django and I've also successfully completed a MongoDB online certificate course just to feed my curiosity for NoSql data. Previous to that I've developed a couple of web applications in which I contributed to the front end and database aspects. During the course of my undergraduate studies I also co-founded UthBuzz, a social media blog that was online for a year. Along with the technical details, I handled the marketing strategies for the same. I've been the head of my college fashion show team and won many college competitions. I've also done a national TV advertisement for a leading bike company in India.

I've always been eager to learn new concepts and techniques and I'm excited to work with Big Data technologies such as Hadoop and Spark and to explore more about Aladdin's infrastructure.

I would be happy to meet with you to discuss, in detail, your requirements and my ability to handle the responsibilities of the position offered. I am very interested in learning more about your company and I am confident I can provide you with effective and profitable results.

Thank you for your consideration. I look forward to talking with you.

Sincerely,  
Kunal S Setpal
